- REDUX TOOLKIT & PERSIST
- NODE.JS
- MONGODB
- HTML, CSS & JAVASCRIPT
- BOOTSTRAP & SASS
- HEROKU & NETLIFY

WORK EXPERIENCE

Built an eCommerce Application

Using MERN(MongoDB, Express.js, React.js, Node.js) stack.

Users can register/login into their accounts, browse through the products, sort them by color, size or price and add them to the cart. Stripe-powered checkout page. Has an admin area to do all sorts of CRUD operations on users/products. Uses Firebase storage to store profile images, redux toolkit & redux persist for global state management, bcrypt hashing & JWT authentication.

Developed a Hotel Booking Application

With MERN stack.

Has a classic landing page. Users can search/view the rooms and sort them by their type & availability. They can create/view their profile and book the rooms/cancel their booking. Includes an admin dashboard to carry out all the CRUD operations. Uses react hooks, redux-bootstrap & rich components of antd library, and Bcrypt for hashing the password before sending the data to the cloud

Built a URL shortening API service

Using Node.js & MongoDB

A micro-service that shortens the URLs provided to it. Similar to URL shorteners like Bitly and Cuttly which are incredibly popular.
